TrendReporter

Full Featured Process Analytics And Reporting System

TrendReporter is an Excel add-in that allows a user to design and generate custom reports. This full featured process analytics and reporting system has been optimized for use with the Canary Enterprise Historian and Excel's extensive capabilities. Standards based, it uses the OPC Historical Data Access (HDA) interface to query data. TrendReporter is powered by the XLReporter family of products created by SyTech, Inc.

Using TrendReporter, users can design a report template using Excel. It's easy to connect to data sources using the intuitive point and click tools provided. Automatically manage raw data into meaningful information by applying powerful analysis routines. Once designed, reports can be generated on-demand or automatically using the provided scheduler. TrendReporter outputs can be published to any local/remote printer, via email, via a Web server or they can easily be converted to encrypted PDF or HTML.

Key Features

- Easy to set up. Use existing templates or design your own

- Use the powerful features of Excel to manipulate, analyze and report your data. All standard features of Excel are available including charting for displaying data in graphical form

- Generate reports on demand or according to a specified scheduled time

- Reports can be formatted in HTML or PDF

- Includes view functions to view reports in a secure environment

- Reports can be viewed from pre-configured lists without the need to browse through a file system
