

# InfoLink LogBook

Canary's InfoLink LogBook is a solution designed to organize your plant operator logs by tracking via an electronic record what happens during a shift. It provides your personnel with the ability to capture operational intelligence and makes the data accessible across the organization. Consolidating your information in one location InfoLink LogBook replaces paper logs, spreadsheets and informal databases. LogBook streamlines the communication process and is ideally suited for recording process operating conditions and conveying key information during shift changeovers.

InfoLink LogBook increases overall effectiveness as personnel can easily view either current or historical logbook entries. Reports can be filtered and sorted by a variety of criteria and provide a detailed summary of the process. These summaries ensure a smooth transition for team members returning from an absence as they are quickly and easily informed of past and current operating conditions, increasing their effectiveness.

Additional features of the InfoLink LogBook are:

- Easy creation and administration
- Create multiple logbooks
- Provide comments and observations during a shift
- Advanced search capabilities making it easy to retrieve operational data
- Integrated with other Canary software solutions

LogBook provides your personnel with powerful tools ensuring operational information is always accessible for anyone, anytime, anywhere.
