

OPC DataHub v7.0

Product description

Existing OPC DataHub customers will be pleased to know that the new v7.0 OPC DataHub is now part of the larger Cogent DataHub family of products. This means that in addition to all of the features present in the older v6.4 OPC DataHub we are now adding the following new and enhanced features:

New and enhanced features

- **New - DataHub QuickTrend** - view live, real-time trends for selected data.
- **Enhanced - Scripting** - program custom solutions to meet your specific needs.
- **Enhanced - Security** - control access and set permissions for users and groups.
- **Enhanced - Email/SMS Notification** to receive an email or SMS message based on data changes
- **Enhanced - Data Logging** - store data in any database table that you choose.

Standard features

- **OPC Support** - connect to OPC servers and clients.
- **OPC Tunnel/Mirror** - network OPC data securely and avoid DCOM.
- **OPC Aggregation** - merge data from multiple sources into a common data set.
- **OPC Bridging** - connect two or more OPC servers to share data in real time.
- **DataHub QuickTrend** - view live, real-time trends for selected data.
- **Scripting** - program custom solutions to meet your specific needs.
- **Security** - control access and set permissions for users and groups.
- **Linux/QNX Connectivity** - to connect to Linux and QNX based systems.
- **DDE/Excel Support** for connecting to Excel spreadsheets and other DDE servers
- **System Monitor** - access to Windows system analytics interface.

Popular new add-on features

- **DataHub WebView** - build and display private cloud-based web pages.
- **Data Historian** to store and retrieve large volumes of data at high speeds.
- **Data Redundancy** to do hot standby switching between identical data sources
